EDUCATION

B.Tech in Computer Science and Engineering, Jaypee Institute of Information Technology
Senior Secondary Education, Renaissance School ,BSR

2022-2026
2021

TECHNICAL SKILLS

- Computer Vision & AI - OpenCV, MediaPipe, PyTorch, Image Processing, Gesture Recognition, Real-Time Vision Systems, Deep Learning Fundamentals, Object Detection Basics
- Tools & Languages - Python, C++, Java, JavaScript, React.js, Next.js, Three.js, MERN Stack, REST APIs
- Databases - SQL, MySQL, MongoDB, Prisma, PostgreSQL
- Tools & Platforms - Git, GitHub, Docker

RESEARCH EXPERIENCE

Summer Research Intern – DRID Giant Project (JIIT, Noida)

Tech Stack: OpenCV, MediaPipe, Python, Three.js

- Engineered real-time gesture recognition systems using OpenCV and MediaPipe for interactive and accessibility-focused applications.
- Developed gesture-controlled games and immersive 3D environments with low-latency hand tracking and optimized real-time processing.
- Worked on computer vision pipelines focused on gesture recognition, human-computer interaction, and real-time performance optimization.

PROJECTS

MarketMentor : GROQ - Powered Stock Market Bot ↻

- Built with **Next.js** and **GroqCloud API**, enabling real-time stock insights, market overviews, heatmaps, and trending updates with a responsive UI.
- Integrated **AI** for **NLP** and stock screening, reducing query processing time by 30% and enhancing data interaction.
- Designed a scalable architecture supporting high-frequency data queries and visualization for better decision-making

2D Game Engine using SDL2 ↻

- Developed a lightweight modular 2D game engine in **C++** using **SDL2** with support for rendering, input handling, and cross-platform execution.
- Implemented core engine systems and optimized real-time rendering workflows for efficient performance and smoother gameplay.

VoteChain : Decentralized Blockchain Voting System ↻

- Engineered a blockchain based voting platform using **Solidity**, **Truffle**, **Ganache**, and **MetaMask** to enable secure and transparent on-chain voting through tamper-proof smart contracts.
- Built a **React + Web3.js** interface supporting election workflows including admin operations, voter onboarding, and secure vote casting with blockchain-based data immutability.

EXPERIENCE

Software Engineering Intern – VARP TechLabs

- Assisting in product development and scalable software engineering tasks.
- Collaborating with cross-functional teams to deliver efficient and reliable software solution.
